MARKETS OF INTEREST

As a leading innovator in the textile industry, we create sustainable, high-performance products that make life better: more comfortable, more beautiful and more functional.

Serving a diverse global client base across three core markets: Luxury, Health and Industry, we bring together specialist departments that complement and strengthen each other.

Every CoverWorks product is the result of our proven D3 approach: responsibly produced, built to last and tailored to deliver tangible value for the end user.

We make it happen, every step of the way.

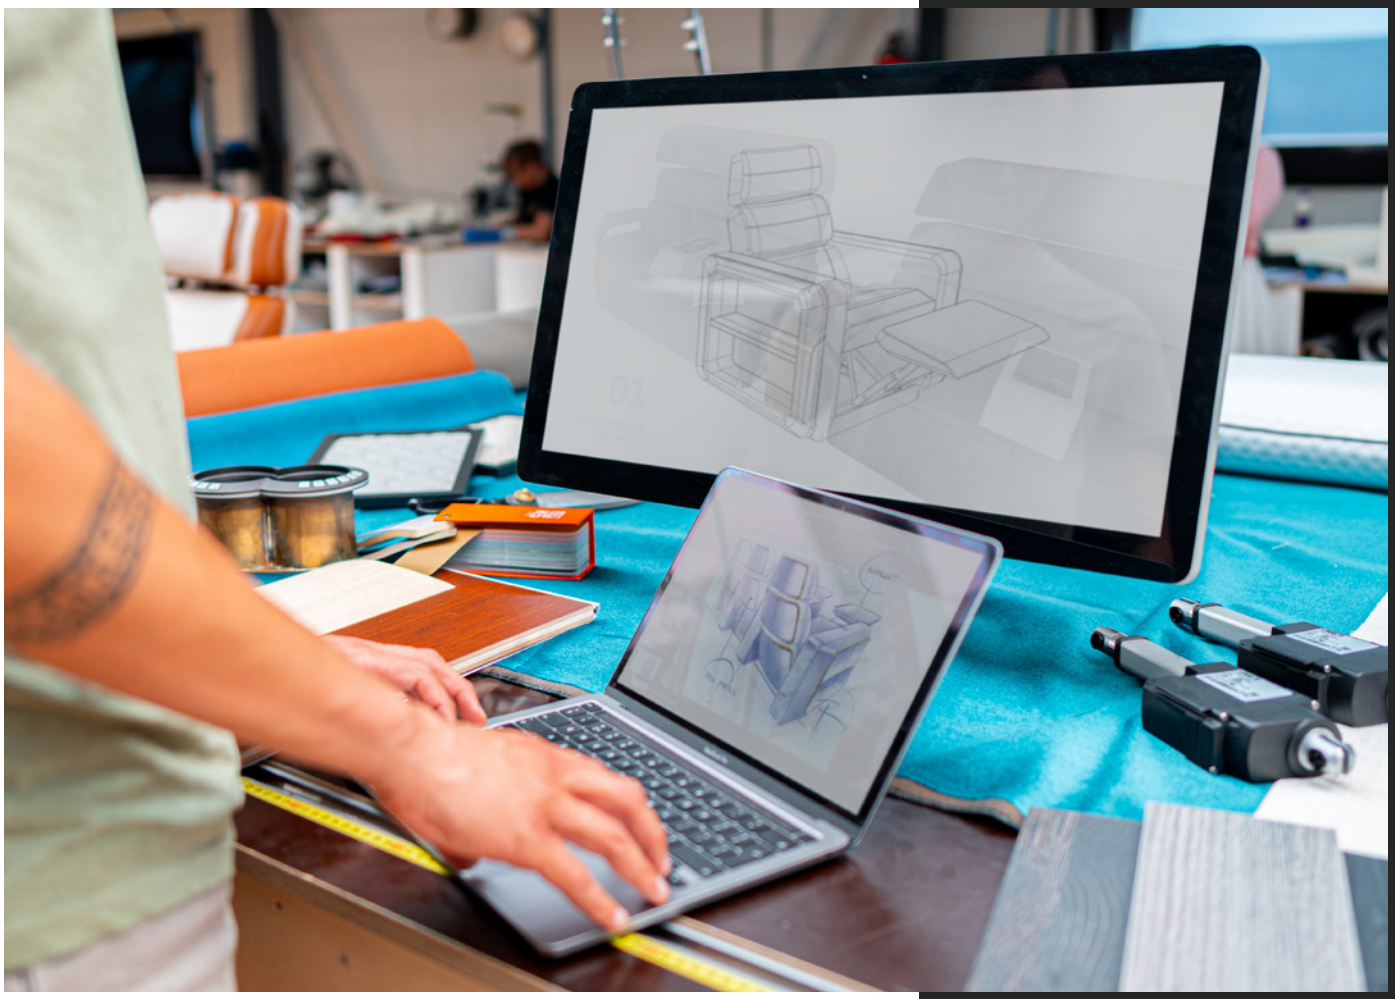
DESIGN.
DEVELOP.
DELIVER.

Our Design, Develop, Deliver approach is the foundation of everything we do. Working with us means more than simply manufacturing your product - it means guiding and supporting you throughout the entire process, from the first discussion of your ideas to the moment your product is ready to use, and everything that must happen in between, all through a multi-stakeholder approach.



WE DESIGN

Your product's success begins with a design that truly meets your needs and the needs of its users. From the very first conversation, we focus on understanding your goals and expectations so that the solutions we develop are completely aligned with your ideas.

By examining the habits, needs and preferences of the people who will use your product, we ensure it not only works but also delivers real value; for example, by enhancing performance, supporting well-being, or improving everyday activities.

With these insights, we create a clear plan and roadmap that guides every decision. The result is a product concept that combines the right functionality, design and user experience.

WE DEVELOP

In this stage, we refine every element of the product design in close collaboration with you, whether it's a completely new creation or an improvement to an existing product.

We manage the entire development process on your behalf, including strategy, planning, prototyping, testing and preparation for production. This ensures that every decision about materials, features and design details supports your objectives and meets user needs.

Potential challenges are identified and resolved early, so you can be confident that the product will function exactly as intended. We approach development as a continuous cycle of building, testing and refining, guaranteeing that by the time the design is finalized, everything is ready for a seamless transition into production.

WE DELIVER

We bring your product to life in production, whether through small runs or high-volume batches.

With strategically located production facilities across Europe and Asia, and our headquarters in the Netherlands, we can take full ownership of the supply chain, managing every step for you - from assembly and mounting hardware to packaging, logistics, quality control and distribution - so you can rely on a smooth and consistent process from start to finish.

Whether production is handled in-house or through trusted partners, we ensure seamless coordination, optimized lead times, minimized risks and reliable delivery, giving you confidence that your product arrives ready to use, on time, every time.
